Subject Index

A

Acetal copolymer pellets, with bilobal and trilobal cross-sections, interparticulate friction behavior, 1637
Acrylonitrile, methacrylic acid, polymerization by p-nitrobenzyl triphenyl phosphonium ylide, 567
Adhesive bonded composite, pipe joints, strength model under tension, 533
Advanced composites, thermoplastic matrix material, thermal stress induced damage, 1337
Air entrainment, continuous processing of concentrated suspensions, rheology, 1386
Amorphous nylon molecular composites, poly-p-phenylene terephthalamide, phase behavior and mechanical properties, 699
Anisotropic thermal expansion, densely cross-linked oriented polymer networks, 625
Antioxidants, stabilization of polypropylene, migration and blooming, 1610

B

Barrier-screw extruders, performance, 831
Binary polyethylene blends, melt index, density, blend ratio, relationships, 1549
Biopolymer extrusion, intermeshing self-wiping screws, 2-d numerical study, 1157
Birefringence
  character of injection- and compression-molded polycarbonate, interpretation, 652
  intrinsic, orientation studies of poly(vinyl chloride), 638
Block copolymers, synthesis of poly(ε-caprolactam)-poly(butadiene-co-acyrlonitrile), reaction injection molding process, 422
Bubble growth, microcellular foaming process, numerical and experimental studies, 1657
Butt joints
  vibration-welded
    glass-filled modified polyphenylene oxide, strength, 511
    polycarbonate to poly(butylene terephthalate), morphology and strength, 502

C

Carbon-epoxy composite, fiber-matrix adhesion, microtexture and mechanical properties of carbon fibers, 1264
Carbon fibers
  microtexture and mechanical properties, carbon-epoxy composite, fiber-matrix adhesion, 1264
  stabilized fibers, influence of continuous stabilization, 1618
Catalyst fragmentation
  during propylene polymerization, bulk polymerization process simulation, 886
  propylene polymerization, comparison of gas phase and bulk polymerization, 904
Cellulosic fibers, reinforcement of high density polyethylene, fiber dispersion and mechanical properties, additives, 1358
Chain flexibility, crosslink density, influence on mechanical properties of epoxy/amine networks, 1572
Coatings, flamesprayed thermoplastic powder, 789
Coextrusion, polymer-polymer interdiffusion, 258
Cogswell's method, measurement of extensional viscosity, assessment, 1015
Cold drawing, melt spinning, effect on Poly(Aryl Ether Ketone) fibers, 172
Compatibilizing agents, flow visualization, elastomer blend mixing, phase morphology, 1742
Composite laminates, hemispherical indenter, impact response, 1461
Composite materials
  fortifiers, impact and compression response, 1310
  microwave joining and repair, 470
Composite processing, aligned and cross-plied carbon fiber beds, permeability and compressibility, 1064
Composites
  based on PP/LDPE blend matrices, mechanical properties, effect of talc surface treatment, 245
  nylon-6 and rubber-toughened nylon-6, RIM-pultrusion, 632
  phenolic resin-nitrile butadiene, aging mechanism, 727
  poly(phenylene sulfide) and PPS/carbon fiber, crystallization kinetics, 607
Composite systems, polyoxymethylene whiskers/polyoxymethylene resin, stiffness, 1716
Compression molding, comparison to injection-molded blends, nylon-6 and polyethylene, phase morphology, 76
Concentrated suspensions, continuous processing, effects of air entrainment on rheology, 1386
Condensation reactions, viscosity buildup, reaction conditions and reactor size effects, 376
Copolyester, liquid crystalline segmented block, preparation and properties, 739
Copolymerization
  soapless emulsion, methyl methacrylate and n-butyl acrylate, 916
  Styrene and acrylic acid, effect of emulsifier type, 404
Copolymers
  acrylonitrile, orientation and properties, 644
  polyethylene, quality control fatigue test, 711
  vinylidene fluoride/trifluoroethylene random, processing-property interactions, 803
Crosslink density, chain flexibility, influence on mechanical properties of epoxy/amine networks, 1572
Crosslinked epoxies, fracture behavior, physical aging, 548
Crystallization
  high temperature, of poly(ethylene terephthalate), 849
  theory, high-speed spinning, 661
Crystallization kinetics, during polymer processing, process modeling approaches, analysis, 730
Curing
  cyanate ester resin systems, analysis, 1604
  epoxy/amine system, dielectric properties, microwave frequencies, 1240
  Epoxy-CTBN mixture, phase separation behavior, 289
  highly viscous liquids, helical flow, 299
  unsaturated polyester resins
    prediction of gel-time, phenomenological modeling vs. statistical analysis, 1647
    viscosity studies and simulations in pre-gel, 321
Cyanate ester, resin systems, analysis of curing behavior, 1604

D

Degree of disorder (DOD) number, compensation phenomena, thermal analysis characterization of polymers, 1467
Dies
  transverse orientation

for extrusion of polymers, orientation and properties of extrudates, 677
polymers extrusion, process mechanics, 667
Differential scanning calorimetry, phenolic resole resin, thermoset cure kinetics, 1665
Diffusion studies, laser interferometry, measurement technique for thin polymer films, 432
Dimethacrylate inhomogeneity, examination, solvent swelling techniques, 1483
Double-notch four-point-bend method, fracture toughness measurements, rubber-modified brittle epoxy systems, 270
Dual polymer bonding, of thermoplastic composite structures, 526
Dynamic melt rheology, dynamic viscosity in relationship to steady shear flow viscosity, 440
Dynamic reaction kinetics, isothermal kinetics, high performance epoxy matrices, 1426
Dynamic viscosity, in relationship to steady shear flow viscosity, dynamic melt rheology, 440

E

Elastomer blends, mixing, influence of compatibilizing agents, effect on phase morphology, flow visualization, 1742
Elastomer-plastic blends, particle size in dispersed phase, quantitative prediction, 1553
Elastomers, flow in internal mixer with intermeshing motors, experiments and modeling, 779
Electrically conductive adhesives, effect of particle composition and size distribution, 445
Electron-beam-irradiated blends, polypropylene and ethylene-propylene-diene monomer (EPDM) rubber, melt rheology, 1539
Epoxy/amine networks, mechanical properties, chain flexibility and crosslink density, influence, 1572
Epoxy-CTBN mixture, phase separation behavior, during curing process, 289
Epoxy matrices, high performance, isothermal and dynamic reaction kinetics, 1426
Epoxy networks, cured, solvent penetration, 689
Epoxy polymer, thermal and mechanical properties, effect of physical aging, 239
Ethylene-1-butene copolymers, Ziegler-Natta catalyst systems, effect of crystallization conditions on morphological structure, 1189
Ethylene polymerization, optimization aspects, high pressure tubular reactors, 381
Ethylene-propylene rubber, functionalization via melt mixing, 1629
Extrusion
plasticating single-screw, Maddock mixing head, performance study, 818
polymers
transverse orientation dies, orientation and properties of extrudates, 677
transverse orientation dies, process mechanics, 667

F

Fabric media, anisotropic in-plane permeability, 1233
Fiber-optic cables, fumed silica dispersions, rheology, 1701
Fiber suspensions
orientation distribution and rheology, effect of nonhomogeneous flow fields, 161
Film, plasma-treated poly(ethylene terephthalate), surface analysis, 812
Flory-Huggins theory
enthalpic and entropic contributions, polymer membrane formation, spinodal decomposition, 1597
system chloroform-polystyrene-butadiene rubber, application, 1527
Flow curve, molecular weight distribution, theoretical models of polymer melts, 1590
Flow fields, nonhomogeneous, orientation distribution and rheology of fiber suspensions, 161
Flow visualization, influence of compatibilizing agents, elastomer blend mixing, phase morphology, 1742
Fluid flowing, non-Newtonian, steady solidification, round tube, 191
Fluorescence monitoring, twin screw extrusion, 1365
Foam extrusion, ultrasonic waves, 1051
Fortifiers, composite materials, impact and compression response, 1310
Fumed silica dispersions, fiber-optic cables, rheology, 1701

G

Gelatin, graft copolymerization, poly(methyl methacrylate), aqueous medium, 1001
Glass fiber-epoxy filament wound composites, rubber toughening, 1057
Glassy polymers, energetics of stress relaxation, high pressure, 1493
Graphite/epoxy laminated composites, impact damage resistance, 1294
Graphite fiber/PMR-15 composites, 316°C isothermally aged, degradation process, mechanical properties and mechanism, 6

H

Heterogeneous polymer systems, electrical conductivity, phase transition at critical volume concentration, evidence, 1200
High density polyethylene, reinforcement with cellulosic fibers, fiber dispersion and mechanical properties, additives, 1358
Highly viscous liquids, curing, helical flow, 299
High-speed spinning, theory of crystallization, 661
High temperature polymers
tough and microcracking resistant
interpenetrating polymer network approach, LaRC-RP41, 20
interpenetrating polymer network approach, LaRC-RP71, 28
Hot-tool welding, computer controlled, quality assurance for mass production, 519

I

Impregnation process, resin transfer molding, modeling, 1149
Injection-molded blends, nylon-6 and polyethylene, phase morphology, comparison with compression molding, 76
Injection mold flashing, liquid crystalline polymers, 1130
Injection molding
advanced process control, 1081
batch-to-batch polymer processes, modeling and control, 1684
crystallinity gradients, slowly crystallizing polymers, computer simulations, 1372
filling and postfilling stages
unified simulation, experimental verification, 125
unified simulation, formulation, 116
long fiber-reinforced thermoplastics, extruded and pultruded materials and direct addition roving strands, comparison, 1316
mold filling process, adaptive model, 1123
poly(2,6-dimethyl-1,4 phenylene ether), crack development, 1393
powder, modeling of mold filling process, 1137
predicted warpage of parts, integrated simulation, 1043
reaction, numerical simulation of mold filling, 842
thermoplastics, residual stress, thermoviscoelastic model, 393
transient melt temperature, experimental/theoretical investigation, 1674
Injection molding machine, mold filling process, dynamic modeling, 1417
In-line rheometer, development, for reactive extrusion processes, 365
In situ composite fibers, liquid crystalline polymer/poly(ethylene terephthalate) blends, 1533
Intermeshing self-wiping screws, 2-d numerical study, biopolymer extrusion, 1157
Interparticulate friction, acetal copolymer pellets, bilobal and trilobal cross-sections, 1637
Ionomers, sodium sulfonated polystyrene, critical ion concentrations, 873
Ion transport behavior, polypyrrole, dopant anion controlled, 417
Isotactic polypropylene, with and without nucleating agents, crystallization characteristics, 1009
Isothermal kinetics, dynamic reaction kinetics, high performance epoxy matrices, 1426

L

Laminate lay-ups, mode I delamination test, 1286
LaRC-RP41, high temperature polymers, tough and microcracking resistant, interpenetrating polymer network approach, 20
LaRC-RP71, high temperature polymers, tough and microcracking resistant, interpenetrating polymer network approach, 28
Laser interferometry, measurement technique in diffusion studies, thin polymer films, 432
Layered polymeric sponges, models for compressibility, 140
Lightguides, doped poly(methyl methacrylate), photoinduced reversible refractive index changes, 912
Liquid crystalline polymers
  injection mold flashing, 1130
  molded polyblends containing, structure and properties, 459
  polyblends containing, structure development during flow, 451
Liquid environments, dynamic mechanical analysis, of polymeric systems, 253
LMR-UV, high resolution negative working resist, for g- and i-line lithography, 855
Long fiber-reinforced thermoplastics, injection molding, extruded and pultruded materials and direct addition roving strands, comparison, 1316

M

Maddock mixing head, plasticating single-screw extrusion, performance study, 818
Maleic anhydride, coupling agent, performance of wood fiber-polystyrene composites, 1351
Melt mixing, functionalization of ethylene-propylene rubber, 1629
Melt spinning
  adaptive pressure control, 1108
  cold drawing, effect on Poly(Aryl Ether Ketone) fibers, 172
Melt temperature, injection molding, experimental and theoretical investigation, 1674
Methacrylic acid, acrylonitrile, polymerization by p-nitrobenzyl triphenyl phosphonium ylide, 567
Methyl methacrylate, n-butyl acrylate, soapless emulsion copolymerization study, 916
Methylmethacrylate polymerization, optimal temperature profiles, end point constraints, 1708
Microbond technique, application, carbon fiber-epoxy interfaces, 1250
Microcellular foaming process, bubble growth, numerical and experimental studies, 1657
Microwave, joining and repair of composite materials, 470
Mode-1 fracture, toughening mechanism, rubber-modified brittle epoxy systems, 275
Mode I delamination test, laminate lay-ups, 1286
Model epoxy networks
  dynamic mechanical response, glassy state, 1476
  glass transition region, viscoelastic response, 615
Molded polyblends, with liquid crystalline polymers, structure and properties, 459
Mold filling process
  injection molding machine
    adaptive model, 1123
    dynamic modeling, 1417
  powder injection molding, modeling, 1137
Molecular weight distributions, determination, viscosity versus shear rate flow curves, 1496
Molten polymers, flow distribution, slit and coathanger dies, three-dimensional finite element analysis, 204
Multidimensionsal composites, mechanical properties, 40

N

n-Butyl acrylate, methyl methacrylate, soapless emulsion copolymerization study, 916
Nip region, parametric study of 2-d model, counter-rotating, non-intermeshing twin screw extruder, 1400
Nucleated polyamide 6, crystallization of polymer melts under fast cooling, 1411
Nylon-6, rubber-toughened nylon-6 composites, RIM-pultrusion of, 632
Nylon/Kevlar composites
  investigation of interfaces, 1228
  mechanical properties, 1222

O

[O_5, 90_5, O_5] Carbon fiber/polyetheretherketone composite laminates, impact-induced delamination, 1301
Optimized extrusion welds, structural and mechanical properties, 495
Orientational crystallization, onset in poly(ethylene terephthalate), low temperature drawing, 1434
Oscillatory deformation
  ultrasonic velocity and attenuation of polymeric solids
    II. high density and linear low density polyethylene and blends, 571
    III. drawn films of high density and linear low density polyethylene and blends, 988

P

Parison swell, high density polyethylene, effect of molecular weight distribution, new measurement method, 705
60/40 PC/SAN blend
  phase morphology, visco-elastic properties, 1207
  phase morphology and ultimate mechanical properties, acrylonitrile content of SAN, 1215
Phenolic resin-nitrile butadiene composites, aging mechanism, 727
Phenolic resole resin, thermoset cure kinetics, differential scanning calorimetry analysis, 1665
Photoinitiated crosslinking
  low density polyethylene, reaction and kinetics, 1561
  low density polyethylene, morphology and properties, 1567
Pipe joints, adhesive bonded composite, strength model under tension, 533
Plastics
  injection molded amorphous engineering
    density distributions, part I, 145
    density distributions, part II, 153
PMR polyimide composites, celion 6000/N-phenylnadimide modified, 371°C (700°F) properties, 14
Poly(2,6-dimethyl-1,4 phenylene ether), injection molding, crack development, 1393
Polyacetylene, compounds doped with alkali metals and oxidants, structures, electrical conductivity, 684
Poly(acrylic acid), effect of drying conditions, on glass transition, 867
Polyamide-imides, synthesis and characterization, 860
Polyaramide blend fiber, polybenzimidazole blend fiber, high-modulus, 1520
Poly(Aryl Ether Ketone), fibers, effect of melt spinning and cold drawing, 172
Polybenzimidazole blend fiber, polyaramide blend fiber, high-modulus, 1520
Poly(Bis Phenol A) Sulfone, Polyetherimide, Poly(P-Phenylene Sulfide) with, characteristics of binary and ternary blends, 84
Polyblends, with liquid crystalline polymers, structure development during flow, 451
Polybutadiene propellant slurry, hydroxyl terminated, effect of temperature, rheological behavior, 61
Poly(butylene terephthalate)
  polycarbonate, vibration-welded butt joints, morphology and strength, 502
  injection- and compression-molded, birefringence character, 652
Polycarbonate
  poly(butylene terephthalate), vibration-welded butt joints, morphology and strength, 502
  polysulfone, diphenylether modified poly(phenyl-1,4-phenylene terephthalate)liquid crystal polymer and blends, studies, 954
Polycarbonate-polystyrene block copolymers, as compatibilizing agents, polymer blends, 1545
Poly(Chlorotrifluoroethylene), Poly(Vinylidene Fluoride), tensile yield, 231
Polyester, flame-retardant fiber-rein-

forced, study of molecular-weight changes, size-exclusion chromatography, 592
Polyester resins
curing of unsaturated, effect of free radical initiators and fillers, 1022
unsaturated
curing, effects of thermoplastic additives, 1450
prediction of gel-time in curing, phenomenological modeling vs. statistical analysis, 1647
Poly(Ether Ether Ketone)
annealing, 586
graphite fiber reinforced tetrahedron truss array, design and manufacture, 1
-liquid crystal polymer blends, rheology, morphology, mechanical characteristics, 971
short-fiber reinforced, prediction of macroscopic thermal residual stresses, micromechanics, 1257
Polyetherimide, Poly(Bis Phenol A) Sulfone and, Poly(P-Phenylene Sulfide), characteristics of binary and ternary blends, 84
Polyethylene
copolymers, quality control fatigue test, 711
gas pipe materials, method to establish long term performance, 1693
high-density, effect of molecular weight distribution, new measurement method, 705
linear low density
instrumented dart impact evaluation, at controlled impact energy, 753
onset of processing defects, effects of polymer structure, 1581
uniaxial extension, long time creep and lifetime behavior, 541
linear low density polyblend and polyalloy, polystyrene, properties and morphology, 1033
low density
photoinitiated crosslinking, morphology and properties, 1567
photoinitiated crosslinking, reaction and kinetics, 1561
low density thin films, slit-seals, low temperature response, 487
pipe resin, extrudate swell, effect of filler content and additives, 1176
ultralow density, blends with polypropylene, 944
Polyethylene pipes, medium-density, fatigue behavior, 399
Poly(Ethylene Terephthalate)
crystallization kinetics, kinetic equation, with variable growth rate, 110
high temperature crystallization, 849
onset of orientational crystallization, low temperature drawing, 1434
plasma-treated film, surface analysis, 812
precrystallized orientation, 1071
Polymer
melt thickness distribution, optimization on large diameter cable, 1165
membrane formation, through spinodal decomposition, analysis, 879
Polymer blends
compatibilization by reactive processing, 929
immiscible, determination of unblended chain dynamic parameters, polar discontinuous phase, 936
60/40 PC/SAN
phase morphology, visco-elastic properties, 1207
phase morphology and ultimate mechanical properties, acrylonitrile content of SAN, 1215
polycarbonate-polystyrene block copolymers, as compatibilizing agents, 1545
poly(etherether ketone)-liquid crystal, rheology, morphology, mechanical characteristics, 971
polystyrene/poly(vinyl methyl ether) blends, phase separation, effect on mechanical properties, 981
poly(vinyl acetate) and poly(methyl acrylate), diffusion of benzene vapor, 1172
Polymer composites, vibration based non-destructive evaluation, 47
Polymer films
laser interferometry, measurement technique in diffusion studies, 432
measurement of thermal properties, photothermal methods, 92
Polymeric solids
ultrasonic velocity and attenuation under oscillatory deformation
II. high density and linear low density polyethylene and blends, 571
III. drawn films of high density and linear low density polyethylene and blends, 988
Polymeric systems, dynamic mechanical analysis, in liquid environments, 253
Polymer melts
crystallization under fast cooling, I. nucleated polyamide 6, 1411
theoretical models of flow curve, molecular weight distribution, 1590
Polymer membrane formation, spinodal decomposition, Flory-Huggins enthalpic and entropic contributions, 1597
Polymer networks
densely cross-linked oriented, anisotropic thermal expansion, 625
interpenetrating unsaturated polyester-polyurethane, I. reaction kinetics and viscosity model, 1182
Polymer-polymer interdiffusion, during coextrusion, 258
Polymer processing, crystallization kinetics, process modeling approaches, analysis, 730
Polymers
batch-to-batch processes, modeling and control, 1684
carbon fiber-epoxy interfaces, application of microbond technique, 1250
interpenetrating network, damping effectiveness, effect of morphology, crosslink density and miscibility, 1731
physical basis for pressure-dependent yield criterion, comments on paper by R. E. Lyon, 924
slowly crystallizing, crystallinity gradients in injection molding, computer simulations, 1372
solid-state extrusion
transverse orientation dies, process mechanics, 667
transverse orientation dies, orientation and properties of extrudates, 677
thermal analysis characterization, compensation phenomena, degree of disorder (DOD) number, 1467
Polymers blends, melting or softening, rheological properties during compounding, 1670
Polymer structure, effects on onset of processing defects, linear low density polyethylenes, 1581
Poly(methyl acrylate), poly(vinyl acetate), diffusion of benzene vapor, 1172
Poly(methyl methacrylate)
doped in lightguides, photoinduced reversible refractive index changes, 912
graft copolymerization of gelatin, aqueous medium, 1001
rubber toughening
effect of size and hard layer composition of rubber particles, 213
effect of twin population of particle size, 218
Poly(methyl methacrylate) composites
pultruded fiber reinforced thermoplastic
I. correlation of processing parameters, 1086
II. mechanical and thermal properties, 1094
Poly(organo)phosphazenes, rheological and morphological characterization, 743
Polyoxymethylene (POM) resin, and POM whiskers, stiffness, 1716
Polyoxymethylene (POM) whiskers, and POM resin composite films, stiffness, 1716
Poly(Paraphenylene), halogen substituted, structural analysis and electrical properties, 436
Polyphenylene oxide, glass-filled modified vibration-welded butt joints, strength, 511
Polyphenylenesulfide
crystallization behavior, 1271
PPS/carbon fiber, crystallization kinetics of composites, 607
Polyphenylenesulfide carbon fiber composite, morphology and mechanical performance, 1279
Poly(p-phenylene benzobisthiazole) fibers, high tension, property modifications, high-temperature drying versus postprocessing heat treatment, 1441
Poly(p-phenylene sulfide)
electronic structure, 717
with Poly(Bis Phenol A) Sulfone and Polyetherimide, characteristics of

binary and ternary blends, 84
Poly-p-phenylene terephthalamide, amorphous nylon molecular composites, phase behavior and mechanical properties, 699
Polypropylene
blends with ultralow density polyethylene, 944
ethylene-propylene-diene monomer (EPDM) rubber, electron-beam-irradiated blends, melt rheology, 1539
hydrostatically extruded, thermal properties and morphology, 1101
injection molded glass fiber-reinforced, weldline strength, 1330
stabilizing antioxidants, migration and blooming, 1610
Polypyrrole, ion transport behavior, dopant anion controlled, 417
Polystyrene
equibiaxial elongational viscosity, measurement of, using lubricated squeezing, 223
linear low density polyethylene polyblend and polyalloy, properties and morphology, 1033
Polystyrene/nylon 6,6 blends, styrene maleic anhydride and styrene glycidyl methacrylate copolymers, *in situ* reactive compatibilizers, 1509
Polysulfone, polycarbonate, diphenylether modified poly(phenyl-1,4-phenylene terephthalate) liquid crystal polymer and blends, studies, 954
Polyurethane composites, incorporations of surface-modified UHMWPE Powders and fibers, 992
Poly(vinyl acetate), poly(methyl acrylate), diffusion of benzene vapor, 1172
Poly(Vinyl Chloride), orientation studies, intrinsic birefringence, 638
Poly(Vinylidene Fluoride), Poly(Chlorotrifluoroethylene), tensile yield, 231
PP-EPDM thermoplastic elastomer, deformation mechanism, elastic-plastic analysis, origin of rubber elasticity, 1029
PP/LDPE blend matrices, composites based, mechanical properties, effect of talc surface treatment, 245
PPS and PEEK composites, carbon fiber reinforced, water absorption and mechanical properties, environmental effects, 34
Processing defects, effects of polymer structure, linear low density polyethylenes, 1581
Propylene polymerization
catalyst fragmentation
bulk polymerization process simulation, 886
comparison of gas phase and bulk polymerization, 904

R

Radially-thick fiber composite rings, residual stresses, winding tension and cure schedule, 1344
Reaction injection molding, Poly(ε-caprolactam)-Poly(Butadiene-co-acrylonitrile) block copolymers, synthesis, 422
Reactive extrusion processes, in-line rheometer, development, 365
Reactive processing, compatibilization of polymer blends, 929
Residence time distribution, ultraviolet method, twin screw extruder, 772
Resin
rubber modified aromatic-ether bismaleimide matrix, morphology and mechanical properties, 563
rubber-toughened epoxy, effect of rubber/matrix interfacial modifications, 577
Resin transfer molding
impregnation and cure process, in-situ monitoring, 56
impregnation process, modeling, 1149
mold filling process, 765
Rigid-rigid polymer alloys, localized yielding under plane stress conditions, mechanical modeling of initiation, 793
RIM-pultrusion, nylon-6 and rubber-toughened nylon-6 composites, 632
Rubber elasticity, origin, PP-EPDM thermoplastic elastomer, elastic-plastic analysis of deformation mechanism, 1029
Rubber-modified brittle epoxy systems
fracture toughness measurements, using double-notch four-point-bend method, 270
toughening mechanisms, under mode-1 fracture, 275

S

Semibatch copolymerization process, multiobjective dynamic optimization, experimental study, 353
Shear flow, agglomerate dispersion by erosion, 548
Shear flow viscosity, in relationship to dynamic viscosity, dynamic melt rheology, 440
Shear rate flow curves, viscosity, determination of molecular weight distributions, 1496
Single screw plasticating extrusion theory
I. new experimental method, 1113
II. non-plug flow solid conveying, 1117
Size-exclusion chromatography, study of molecular-weight changes, flame-retardant fiber-reinforced polyester, 592
Slit-seals, low temperature response, in low density polyethylene thin films, 487
Slot cast coextrusion, bicomponent two-layer, 197
Solid-filled rubbers, nonlinear mechanical model, 410
Solvent swelling techniques, examination of dimethacrylate inhomogeneity, 1483
Spinodal decomposition, polymer membrane formation, Flory-Huggins enthalpic and entropic contributions, 1597
Stabilization, continuous, influence on stabilized fibers and final activated carbon fibers, 1618
Stannous dicarboxylates, polymeric structures, varied reactant ratios, 1194
Stirred tank polymerization reactors, dynamics of a cascade, with binary initiator mixture, 333
Styrene maleic anhydride copolymer, styrene glycidyl methacrylate copolymer, *in situ* reactive compatibilizers for Polystyrene/nylon 6, 6 blends, 1509
Suspension polymerization, of vinyl chloride, gradual dosage of the initiator, 313
System chloroform-polystyrene-butadiene rubber, application of Flory-Huggins theory, 1527

T

Thermal residual stress, prediction of macroscopic, short-fiber reinforced polyetheretherketone, micromechanics, 1257
Thermoforming, batch-to-batch polymer processes, modeling and control, 1684
Thermoplastic composite structures, dual polymer bonding, 526
Thermoplastics
fiber pull out experiments, 1246
strength and toughness of fusion bonded joints, non-isothermal healing model, 1720
Thermoplastic sheet molding compound-glass fiber composite, dynamic mechanical response, 104
Thermoviscoelastic model, for injection molded thermoplastics, residual stress, 393
Toner melt rheology, coupled relaxation model, 99
Tubular nylon 6 reactor, optimization with radial gradients, 596
Twin screw extruder
counter-rotating, non-intermeshing, parametric study of 2-d model of nip region, 1400
determination of residence time distribution, ultraviolet method, 772
Twin screw extrusion, fluorescence monitoring, 1365

U

Unsaturated polyester resins, curing, viscosity studies and simulations in pre-gel state, 321

V

Vinyl chloride, suspension polymerization, gradual dosage of the initiator, 313
Vinylidene fluoride/trifluoroethylene, random copolymers, processing-property interactions, 803
Viscoelastic liquid, film casting, 67

W

Wood fiber-polystyrene composites, performance, maleic anhydride as coupling agent, 1351

Y

Yielding, rigid-rigid polymer alloys, localized under plane stress conditions, mechanical modeling of initiation, 793

Z

Ziegler-Natta catalyst systems, ethylene-1-butene copolymers, effect of crystallization conditions on morphological structure, 1189
